

8. How do you issue a Death Certificate in the system?

To issue a death certificate:

- i. Go to the Forensic Dashboard
- ii. Click the three-dot icon beside the patient
- iii. Select Death Certificate.
- iv. Enter the required details such as:
 - Cause of death
 - Date of death
 - Other necessary information
- v. Click Save

The death certificate will then be recorded in the system.

8. How do you order laboratory or radiology tests for a deceased person?

To order tests:

- i. Open the patient record in the Forensic Dashboard.
- ii. Click Order Test
- iii. In the Search Orders field, search for the required test.
- iv. Select the laboratory or radiology test.
- v. Click Save
- vi. Confirm by clicking Yes.

The test order will be sent to the LIS (Laboratory Information System) or RIS (Radiology Information System)

9. How can users view forensic and laboratory reports?

To view reports:

- i. Click on the Medical Report File icon.
- ii. Two options will appear:
 - F – View forensic data captured in the forensic dashboard.
 - I – View laboratory or imaging test reports.

This allows users to review both forensic findings and medical test results.

10. How do you access the Mortuary module in Epis?

To access the Mortuary module:

- i. Click on the Mortuary Icon in the system.
- ii. Select the Freezer where the body is stored.

This module is used to manage body storage and freezer monitoring.

11. How do you record freezer temperature in the mortuary?

To record temperature details:

- i. Click the three-dot icon next to the freezer.
- ii. Enter the following values:
 - Maximum Temperature
 - Current Temperature
 - Minimum Temperature
- iii. Click Save.

This helps maintain proper storage conditions for deceased bodies.

12. How can users view the freezer temperature chart?

To view temperature history:

- i. Click the three-dot icon next to the freezer.
- ii. Select View Temperature Chart.

The system will display a graph showing temperature variations over time.

13. How do you hand over a dead body to the relatives?

To hand over the dead body:

- i. Click the three-dot icon beside the deceased record.
- ii. Select Dead Body Handover
- iii. Enter the required details about:
 - The person receiving the body
 - Relationship to be deceased
 - Date and time of handover
- iv. Click Save

This records the official handover of the body to the relatives.

MODULE: Administration

Doctor User Creation

1. What is the Administration Module in EPIS?

The Administration Module is used to manage users and roles in the epis system.

It allows administrators to:

- Create doctor/prescriber users
- Assign roles
- Map departments
- Enable appointment availability
- Assign chambers

2. How do you create Doctor/prescriber user in EPIS?

To create a doctor user:

- Go to menu bar at side and search Application user
- Click on create user and put all necessary details about the users and save
- Click on Add doctor if the user is doctor(only)
- Select the Role based on their specialty
- Add Doctor Department
- Click save and update

The user will be successfully updated.

3. How do you assign a department to a doctor?

After creating the doctor user:

- Click on the Select dropdown (--select--)
- Choose the Department where the doctor will work.
- Click Save or Update.

This step ensures that the doctor is linked to the correct department.

4. How do you assign a chamber to a doctor?

After mapping the department:

- Click on Assign Chamber
- Click on add new button.
- Click on the facility department where the doctor is mapped.
- The doctor will automatically appear in the list, and the chamber can then be assigned.
- Click Save to complete the process.

5. Why am I unable to assign a doctor role to a user?

The reasons are:

- i. User is not created in the system
- ii. Insufficient admin permissions
- iii. Role not selected properly
- iv. System error or network issue
